PERSONAL SUMMARY

Full stack web developer with significant life experience solving problems across multiple industries and sectors, allowing me to quickly grasp issues and need to effect robust solutions. Changes in personal circumstances have created an opportunity to align long-term technology passion and experience more succinctly with my work and career aspirations.

TECHNICAL SKILLS

HTML, CSS, JavaScript, React, Jest, Node.js, express, Auth0.

- Gained experience using these technologies in various school client/server projects such as 'Reservationizr' and 'Cat Couture' noted below.
- I am also using these technologies in my ongoing personal project 'RaceDay' also noted below.

Docker, PostgreSQL, MongoDB, Supertest.

- Gained experience using these technologies in various school projects client/server such as 'Reservationizr' and 'Cat Couture' noted below.

AWS CI/CD pipelines / Git/GitHub

- Currently configuring AWS continuous integration and continuous delivery linked to Git/Github with a final group project to deliver a Student Q&A portal application

TECHNICAL PROJECTS

RaceDay – Github | Client Application | API Server Specification

An application and API server to allow for Australian TAB live and historical racing data to be viewed and analysed.

- Implemented a client React app to query and present Australian TAB racing data.
- Implemented an API server to query the Australian TAB server using Node.js, and express.
- Updated the client react app to interface with the API Server.
- Utilised jest and react testing library for unit testing of the client app and API Server.

This project is ongoing with Auth0, and database capabilities yet to be implemented to allow for historical data analysis and reporting.

Reservationizr - Github | Demo App

An application to allow users to make reservations at local restaurants

- Implemented a client React app to enable customers to make and view restaurant reservations
- Implemented a Node.js API Server with MongoDB to serve product data
- Utilised Auth0 and secure route for a customer to view their reservations.

Cat Couture – Github | Demo app

An online shopping application for Cat Couture products.

- Implemented a React online shop storefront to present product information obtained from an API Server
- Implemented a Node.js API Server with PostgreSQL DB to serve product data
- Utilised Auth0 for secured product reports.

EMPLOYMENT HISTORY

Developers Institute   Whangarei
Student full time   06/2021 - Present
  ● Learning full stack development focused on the MERN & PERN technology stacks, Auth0, Docker,
     Git/Github, Jest and DevOps utilising Lean and Agile methodologies, resulting in straight A's to date.

Divest Business Sales   Auckland
Business Broker   2014 - 2021
  ● Broker business sales by attracting clients, marketing businesses for sale, negotiating sales and
     agreements, concluding sales and business ownership transitions. Successfully sold many
     businesses.
  ● Implement Dynamics CRM for personal prospect, client and account management. Successfully
     deployed and maintained a private cloud implementation of Microsoft Dynamics CRM integrated with
     Outlook.

PWC (Price Waterhouse Coopers)   Auckland
Contract ITSM (IT Service Management) Consultant   2013 - 2014
  ● Implement ITIL v3 core process to ensure PWC compliance with parent org IT standards. ITSM core
     processes were implemented, staff trained and an existing Lotus Notes application was updated to
     reflect new ITIL processes. ITSM Dashboard Reporting was also implemented for IT management.
